

Wine Cellar climate control wholesalers, serving the HVAC industry over 20 years worldwide.

Moniteur du Vin™

Weather is always unpredictable, especially in the winter. Now add La Niña, which meteorologists are already predicting will have a significant impact on weather over the next few months.

Enter the Wine Guardian Moniteur du Vin™ This device is a cellular-based monitoring application that can alert you of changes in the temperature, humidity or power usage in your wine cellar.

When a change in status is detected, an alert is immediately sent via text, call or email. Remote access to the Moniteur du Vin™ is available as well to change the safe ranges of temperature, humidity and power.

Also, what if a storm knocks out the phone lines or power lines to your property? If this happens, these other alarm systems are useless. Moniteur du Vin™ not only contains a temperature, humidity and power monitor, it is also essentially a cell phone. It calls Wine Guardians' Moniteur du Vin™ server immediately if there is an issue. Once the server has this information, it automatically contacts you via a text message, e-mail message or even a voice phone call to let you know what's wrong. It has an internal long-life battery so when power is knocked out, it keeps operating providing notification so that you can take immediate action to protect your property from damage.

Wine Guardian's Moniteur du Vin™ is the most powerful, cellular connected, temperature, humidity, and power Wine Cellar Monitor available today. Its simplistic design and many features will protect your wine cellar as well as give you peace of mind. Whether you are gone for weeks, months or longer, Moniteur du Vin™ will watch your property and ensure the heater, air conditioner and power are on and working. If there is an issue you will know immediately. This also includes if a storm knocks out the phone lines or power lines to your property.
